Computing Progression Document

In this document, we have put together a comprehensive list of statements/objectives for every element of the computing curriculum from EYFS - Year 6. We feel this will demonstrate a clear progression of knowledge/skills that will help staff best implement computing in their school.

We have broken the computing curriculum into these areas:

Computer Science	Information Technology	Digital Literacy
<u>Computational Thinking</u>	<u>Word Processing/Typing</u>	<u>Self Image and Identity</u>
<u>Coding/Programming</u>	<u>Data Handling</u>	<u>Online Relationships</u>
<u>Computer Networks</u>	<u>Presentations, Web Design and eBook Creation</u>	<u>Online Reputation</u>
<u>Artificial Intelligence</u>	<u>Animation</u>	<u>Online Bullying</u>
	<u>Video Creation</u>	<u>Managing Online Information</u>
	<u>Photography and Digital Art</u>	<u>Health, Wellbeing and Lifestyle</u>
	<u>Augmented Reality and Virtual Reality</u>	<u>Privacy and Security</u>
	<u>Sound</u>	<u>Copyright and Ownership</u>

How to implement this document:

As with most of the ideas on MrPICT.com, we feel the majority of computing should be embedded across the curriculum. Most schools will be timetabled to a Computing session each week, however knowing how packed a weekly timetable can be, we hope this approach will allow for flexibility. We would recommend the timetabled computing session to focus on one of three elements: **An Explicit Computer Science lesson, A Tinkering Session or a D.A.R.E.S project.** The computer science part of the computing curriculum will often, but not always, need a more explicit approach. That is not to say it can't be embedded across the curriculum. A tinkering session looks at introducing a new app or tool and giving children opportunity to experiment and familiarise themselves with the different elements and tools before it can be applied in a more focused approach across the curriculum.

Do you have to have a timetabled computing lesson each week? As much as possible yes, however, we know how packed the curriculum can be and how difficult it is trying to fit everything in. Therefore, some weeks computing can be covered by using technology to demonstrate learning in other subjects when covering more of the Information Technology and Digital Literacy strands.

For example: If my class were covering World War 2 in Year 6 and we are exploring how the Second World War started, I could set the children the task of creating a video explaining this. First, the children may want to research some more information about how the Nazi party rose to power. This would involve covering some Digital Literacy: Managing Online Information -

- *To know how to use search technologies effectively.*
- *To know how to explain how search engines work and how results are selected and ranked.*
- *To know how to demonstrate the strategies I would apply to be discerning in evaluating digital content.*
- *To know how to describe how some online information can be opinion and can offer examples.*

If the pupils were to then create a video using an app such as Adobe Spark Video to demonstrate their learning, they would be covering some of the Information Technology: Video Creation -

- *To know how to create videos using a range of media - green screen, animations, film and image.*

If the pupils were to then upload or publish their work on a blog or platform such as Seesaw, we would also be covering this objective from Information Technology: Word Processing objectives -

- *To know how to publish my documents online regularly and discuss the audience and purpose of my content.*

Even though this would be a History lesson, we would be covering a fair few computing objectives therefore if we need to spend more time on other subjects that week, we are still covering computing without having a timetabled computing session. This is the way we want computing delivered in Primary schools, embedded to allow learning to be more accessible and allow learners to be more creative in demonstrating their learning.

Computer Science

Computer science has been broken down into four strands: Computational Thinking, Programming, Computer Networks and Artificial Intelligence

Computational Thinking is all about solving problems effectively with or without a computer. Computational thinking is about looking at a problem in a way in which a computer can help us to solve it. This is a two-step process:

1. First, we think about the sequence of steps (an algorithm) needed to solve a problem
2. Then, we use our technical skills to get the computer working on the problem as we implement our algorithm as code.

As demonstrated with Dr Chips' support videos, a lot of these objectives can be applied across the curriculum.

Programming is one application of computational thinking. Learners will write algorithms and implement these as code. They also need to be able to find mistakes and fix them (debugging.) Once learners have created a program they need to learn to evaluate and look at different ways to achieve the same goal and which method is most appropriate.

As learners get older the programs they write will become more complex using a range of constructs such as sequence, selection, repetition and variables in their programs.

KS 2 pupils also require knowledge of networks, such as the Internet, work and how searches are performed.

Artificial Intelligence will likely become a huge aspect of computing and so introducing, experimenting and even inputting data into machine learning is something we feel learners should know.

Artificial Intelligence

<u>Year Group</u>	<u>Knowledge Statements</u>
EYFS	<ul style="list-style-type: none">• I know that machines and computers can be used to perform tasks.• I know interact with simple AI such as Siri and dictation.
1	<ul style="list-style-type: none">• I know how to use simple AI technology and can talk about what it does• I know that data is used by computers to store and process information.
2	<ul style="list-style-type: none">• I can explain some advantages and disadvantages of using simple AI technology• I know that artificial intelligence can be used to simulate human-like abilities in a computer.
3	<ul style="list-style-type: none">• I understand data is used to train AI technology• I know the basics of machine learning and how computers can be trained to perform tasks using data and algorithms.
4	<ul style="list-style-type: none">• I can train an AI model and investigate how more data can make it more accurate• I know about big data and how it can be used to inform decision-making and improve machine learning algorithms.
5	<ul style="list-style-type: none">• I can create and train an AI invention using image recognition• I know about computer vision and how computers can be trained to recognize and interpret images.
6	<ul style="list-style-type: none">• I can train an AI model and use it within a program• I know about chatbots and how they can be used to simulate conversation with a computer.

Information Technology

This part of the curriculum is essentially most of the old ICT curriculum. As stated in the introduction, most of these objectives should be covered by using tech creatively across the rest of the curriculum, although it may be necessary to teach some discrete knowledge, hence the tinkering sessions and D.A.R.E.S projects. Learners should know that technology is everywhere, be able to identify the technology they encounter and have a growing understanding of how it works.

We have broken down this part of computing into activities for word processing, spreadsheets and data handling, presentation, ebook creation, web design, animation, video creation, photography and art, sound and AR & VR. When using these ideas to create content everything should link closely to digital literacy – awareness of audience and good design principles. Pupils should experience a range of different apps and software all of which are demonstrated on MrPICT.com. Lower down the school, the teacher will select the programs to use but as pupils get older they should be encouraged to make their own choices.

Learners also need to know how to store and organise their files online and locally so that it can easily be found again. As discussed on the website, Seesaw is a fantastic tool to use for this.

Digital Literacy

All of the statements from this document have been taken from the Education for a Connected World Document.

Today's children and young people are growing up in a digital world. As they grow older, it is crucial that they learn to balance the benefits offered by technology with a critical awareness of their own and other's online behaviour, and develop effective strategies for staying safe and making a positive contribution online. This framework describes the skills and understanding that children and young people should have the opportunity to develop at different ages and stages. It highlights what a child should know in terms of current online technology, its influence on behaviour and development, and what skills they need to be able to navigate it safely.
